In stream settings, chemical piscicides can be an effective tool for eradicating invasive fishes. However, chemical treatments are expensive and time consuming, and they do not discriminate between invasive and native species in a system. Therefore, managers would ideally limit treatment to only too much or too little of a stream network.

and show how the chemical master equation arises. The stochastic simulation algorithm, a computational tool for sampling from the chemical master equation, is described in section 4. In section 5 we introduce tau-leaping as a way to speed up simulations, and in section 6 we show how this modification leads naturally to the chemical Langevin.
