Influenza, commonly known as "the flu", is an infectious disease caused by an influenza virus. Symptoms can range from mild to severe and commonly include: high fever, runny nose, sore throat, muscle and joint pain, headache, coughing, and feeling tired. These symptoms typically begin two days after exposure to the virus and most last less than a week, although the coughing may last for more

## Medical Myths: Unprepared For The End - Health Affairs

In 1967, infants and toddlers immunized with a formalin-inactivated vaccine against respiratory syncytial virus (RSV) experienced an enhanced form of RSV disease characterized by high fever, bronchopneumonia, and wheezing when they became infected with wild-type virus in the community. Hospitalizations were frequent, and two immunized toddlers died upon infection with wild-type RSV.

## Menopause - Wikipedia

The menopausal transition, and postmenopause itself, is a natural change, not usually a disease state or a disorder. The main cause of this transition is the natural depletion and aging of the finite amount of oocytes (ovarian reserve). This process is sometimes accelerated by other conditions and is known to occur earlier after a wide range of gynecologic procedures such as hysterectomy (with

The mission of The Journal of Foot & Ankle Surgery is to be the leading source for original, clinically-focused articles on the surgical and medical management of the foot and ankle. Each bi-monthly, peer-reviewed issue addresses relevant topics to the profession, such as: adult reconstruction of the forefoot; adult reconstruction of the hindfoot and ankle; diabetes; medicine/rheumatology

## Home Page: Urology

Influenza, commonly known as the flu, is an infectious disease of birds and mammals. It was thought to be caused by comets, earthquakes, volcanoes, cosmic dust, the rising and setting of the sun, vapors arising from the air and ground, or a blast from the stars. Now we know that it is caused by an RNA virus of the family Orthomyxoviridae (the influenza viruses).

Poliomyelitis, commonly shortened to polio, is an infectious disease caused by the poliovirus. In about 0.5 percent of cases, it moves from the gut to affect the central nervous system and there is muscle weakness resulting in a flaccid paralysis. This can occur over a few hours to a few days. The weakness most often involves the legs, but may less commonly involve the muscles of the head

### Spanish Flu | 10 Facts About The 1918 Influenza Pandemic

Polio eradication, the permanent global cessation of circulation by the poliovirus and hence elimination of the poliomyelitis (polio) it causes, is the aim of a multinational public health effort begun in 1988, led by the World Health Organization (WHO), the United Nations Children's Fund (UNICEF) and the Rotary Foundation. These organizations, along with the U.S. Centers for Disease Control

### Human enhancement: Is it good for society? -- ScienceDaily

Amblyopia as a binocular disease . Amblyopia typically affects visual acuity in one eye, and was always considered a monocular disease. For this reason, the main treatment has been occlusion of the fellow eye to improve the monocular function of the amblyopic eye.

An evaluation should start with the health provider asking for more information regarding the symptoms, including how long they've been going on, as well as the frequency and consistency of stools. It's also important for the clinician to ask about "red flags" that might indicate something more serious, such as colon cancer.

### Polio - Wikipedia

Spanish Flu, or more accurately the 1918 influenza pandemic, is one of the deadliest natural disasters in human history. It struck in the final year of the First World War and spread across the world killing millions of people. Here are 10 interesting facts about this unusually deadly influenza pandemic.
