Neuroanatomy encompasses the anatomy of all structures of the central nervous system, which includes the brain and the spinal cord, and their supporting structures.. This anatomy section promotes the use of the Terminologia Anatomica, the international standard of anatomical nomenclature.

### Quiz Form - Anatomy Guy

Regions of the head and neck. Author: Onome Okpe • Reviewer: Ryan Sixtus MPhEd  
Last reviewed: August 31, 2020 Reading time: 11 minutes The head is the superior part of the body that is attached to the trunk by the neck. It is the control and communication center as well as the “ loading dock ” for the body.

### Delineation of the neck node levels for head and neck

The sympathetic fibres to the head and neck begin in the spinal cord. They originate from the thoracic region (T1-6), and therefore need to ascend to reach the structures in the head and neck. After leaving the spinal cord, the fibres enter the sympathetic chain. This structure spans from the base of the skull to the coccyx, and is formed by

Skin. The head and neck is covered in skin and its appendages, termed the integumentary system. These include hair, sweat glands, sebaceous glands, and sensory nerves. The skin is made up of three microscopic layers: epidermis, dermis, and hypodermis. The epidermis is composed of stratified squamous epithelium and is divided into the following five sublayers or strata, listed in order from outer

### Current Topics in Otolaryngology – Head and Neck Surgery

Head and neck (anterior view) The head and neck are two examples of the perfect anatomical marriage between form and function, mixed with a dash of complexity. The neck is resilient enough to sustain a five kilogram weight 24/7, yet sufficiently mobile to move it in several directions.
