Hallowell, founded by Kathy Leo of Vermont, is a hospice choir connected to Brattleboro Area Hospice. Hallowell has served as a model for many other hospice choirs formed as part of this growing movement. Kathy continues to co-lead workshops in the practice of bedside singing for the dying. She also works part time as a care coordinator for Brattleboro Area Hospice. Prior to her work with the dying, Kathy was a midwife and childbirth educator.

Dying for Compassion

Ever wonder what would happen if the Earth stopped spinning? Or lost all of its water at once? Or got hit by a fish the size of Pluto? In Volume One of his popular Quora Answers series, science teacher David Consiglio, Jr. ponders and logically answers these insane scenarios using well-established scientific methods and reasoning! Spoiler Alert-Everyone Dies(TM).

Starman

This is how the world ends. This is how the world ends. This is how the world ends. Not in a bang, but in a book. 58 flash fiction stories of the final hours. Passion, pain and horror of the end of days, all in short vignettes. Featuring stories from: Christine Morga, Essel Pratt, Cameron Suey, T. Fox Dunham, Guy Anthony De Marco, Mandy DeGeit, Jessica McHugh, Kristopher Kelly, E. Catherine Tobler, Jamie Lackey, George Cotronis, William R.D. Wood, Lee Clark Zumpe, Lincoln Crisler, Eryk Pruitt, Michael H. Antonio, Kallirroe Agelopoulou, Steve Calvert, Rebecca J. Allred, Darcie Little Badger, Erik B. Scott, Terry M. Fuckery

An astrophysicist presents an in-depth yet accessible tour of the universe for lay readers, while conveying the excitement of astronomy. How is a galaxy billions of lightyears away connected to us? Is our home nothing more than a tiny speck of blue in an ocean of night? In this exciting tour of a universe far larger than we can imagine, cosmologist Paul M. Sutter emphasizes how amazing it is that we are part of such a huge, complex, and mysterious place. Through metaphors and uncomplicated language, Sutter breathes life into the science of astrophysics, unveiling how particles, forces, and fields interplay to create the greatest of cosmic dramas. Touched with the author's characteristic breezy, conversational style--which has made him a breakout hit on venues such as The Weather Channel, the Science Channel, and his own popular Ask a Spaceman! podcast--he conveys the fun and wonder of delving deeply into the physical processes of the natural universe. He weaves together the past and future histories of our universe with grounded descriptions of essential modern-day physics as well as speculations based on the latest research in cosmology. Topics include our place in the Milky Way galaxy; the cosmic web--a vast web-like pattern in which galaxies are arranged; the origins of our universe in the big bang; the mysteries of dark matter and dark energy; how science has dramatically changed our relationship to the cosmos; conjectures about the future of reality as we know it; and more. For anyone who has ever stared at the starry night sky and wondered how we humans on Earth fit into the big picture, this book is an essential roadmap.

This sequel to Carl Sagan's blockbuster continues the electrifying journey through space and time, connecting with worlds billions of miles away and envisioning a future of science tempered with wisdom. Based on National Geographic's internationally-renowned television series, this groundbreaking and visually stunning book explores how science and civilization grew up together. From the emergence of life at deep-sea vents to solar-powered starships sailing through the galaxy, from the Big Bang to the intricacies of intelligence in many life forms, acclaimed author Ann Druyan documents where humanity has been and where it is going, using her unique gift of bringing complex scientific concepts to life. With evocative photographs and vivid illustrations, she recounts momentous discoveries, from the Voyager missions in which she and her husband, Carl Sagan, participated to Cassini-Huygens's recent insights into Saturn's moons. This breathtaking sequel to Sagan's masterpiece explains how we humans can glean a new understanding of consciousness here on Earth and out in the cosmos--again reminding us that our planet is a pale blue dot in an immense universe of possibility.

"The Black Star Passes" by Jr. John W. Campbell. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten?or yet undiscovered gems?of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

Spoiler Alert Everybody Dies

Active Debris Removal in Space

English Mechanic and World of Science

All the matter and light we can see in the universe makes up a trivial 5 per cent of everything. The rest is hidden. This could be the biggest

puzzle that science has ever faced. Since the 1970s, astronomers have been aware that galaxies have far too little matter in them to account for the way they spin around: they should fly apart, but something concealed holds them together. That 'something' is dark matter – invisible material in five times the quantity of the familiar stuff of stars and planets. By the 1990s we also knew that the expansion of the universe was accelerating. Something, named dark energy, is pushing it to expand faster and faster. Across the universe, this requires enough energy that the equivalent mass would be nearly fourteen times greater than all the visible material in existence. Brian Clegg explains this major conundrum in modern science and looks at how scientists are beginning to find solutions to it.

The Black Star Passes

Telluride Medical Examiner Jane Wallace travels to Ireland to investigate Irish author Eoin Conner's involvement in the death of Fiona, his estranged wife, while Father Matt is faced with his own share of mysteries to solve at home in Telluride.

Dancers Between Realms

So you've fallen in love with space and now you want to see it for yourself, huh? You want to witness the birth of a star, or visit the black hole at the center of our galaxy? You want to know if there are aliens out there, or how to travel through a wormhole? You want the wonders of the universe revealed before your very eyes? Well stop, because all that will probably kill you. From mundane comets in our solar backyard to exotic remnants of the Big Bang, from dying stars to young galaxies, the universe may be beautiful, but it's treacherous. Through metaphors and straightforward language, it breathes life into astrophysics, unveiling how particles and forces and fields interplay to create the drama in the heavens above us.

How to Die in Space

Part memoir, part guidebook, and part social history, *For Small Creatures Such as We* is the first book from the daughter of Carl Sagan and Ann Druyan--a luminous exploration of Earth's marvels that require no faith in order to be believed. "What is the meaning of life? Sagan finds its meaning everywhere--with her family, around the world, and especially among the stars of the cosmos. Read her work; you'll have a deeper appreciation for your every step, every bite, and every breath." --Bill Nye Sasha Sagan was raised by secular parents, the astronomer Carl Sagan and the writer and producer Ann Druyan. They taught her that the natural world and vast cosmos are full of profound beauty, that science reveals truths more wondrous than any myth or fable. When Sagan herself became a mother, she began her own hunt for the natural phenomena behind our most treasured occasions--from births to deaths, holidays to weddings, anniversaries, and more--growing these roots into a new set of rituals for her young daughter that honor the joy and significance of each experience without relying on religious framework. As Sagan shares these rituals, *For Small Creatures Such as We* becomes a moving tribute to a father, a newborn daughter, a marriage, and the natural world--a celebration of life itself, and the power of our families and beliefs to bring us together.

Vignettes from the End of the World

A brilliant and breathtakingly vivid tour of the universe, describing the physics of the dangerous, the deadly, and the scary in the cosmos. So you've fallen in love with space and now you want to see it for yourself, huh? You want to witness the birth of a star, or visit the black hole at the center of our galaxy? You want to know if there are aliens out there, or how to travel through a wormhole? You want the wonders of the universe revealed before your very eyes? Well stop, because all that will probably kill you. From mundane comets in our solar backyard to exotic remnants of the Big Bang, from dying stars to young galaxies, the universe may be beautiful, but it's treacherous. Through metaphors and straightforward language, it breathes life into astrophysics, unveiling how particles and forces and fields interplay to create the drama in the heavens above us.

Perseus Transit

On April 12, 1961, Yuri Gagarin became the first person in history to leave the Earth's atmosphere and venture into space. His flight aboard a Russian Vostok rocket lasted only 108 minutes, but at the end of it he had become the most famous man in the world. Back on the ground, his smiling face captured the hearts of millions around the globe. Film stars, politicians and pop stars from Europe to Japan, India to the United States vied with each other to shake his hand. Despite this immense fame, almost nothing is known about Gagarin or the exceptional people behind his dramatic space flight. Starman tells for the first time Gagarin's personal odyssey from peasant to international icon, his subsequent decline as his personal life began to disintegrate under the pressures of fame, and his final disillusionment with the Russian state. President Kennedy's quest to put an American on the Moon was a direct reaction to Gagarin's achievement--yet before that successful moonshot occurred, Gagarin himself was dead, aged just thirty-four, killed in a mysterious air crash. Publicly the Soviet hierarchy mourned; privately their sighs of relief were almost audible, and the KGB report into his death remains secret. Entwined with Gagarin's history is that of the breathtaking and highly secretive Russian space program - its technological daring, its triumphs and disasters. In a gripping account, Jamie Doran and Piers Bizony reveal the astonishing world behind the scenes of the first great space spectacular, and how Gagarin's flight came frighteningly close to destruction.

Lightblaser

More than 30 million Americans quit their jobs in 2015. Many of them left because their jobs had become too toxic to tolerate. How does this happen? How can it be stopped? FUCKERY teaches career-driven employees how to break the bad habits that destroy people and undermine performance. By mapping negative habits, you'll reclaim lost productivity, repair disabled communication, and root out what threatens success. Transform "I can't wait to leave" into "I'm excited to be a part of this team."

Punches, Dies and Tools for Manufacturing in Presses

A brilliant and breathtakingly vivid tour of the universe, describing the physics of the dangerous, the deadly, and the scary in the cosmos. Through metaphors and straightforward language, it breathes life into astrophysics, unveiling how particles and forces and fields interplay to create the drama in the heavens above us.

For Small Creatures Such as We

The central character of the book is Adam Salton, an Australian at the outset living there, who in 1860 is contacted by his elderly great-uncle, Richard Salton, a landed gentleman of Lesser Hill, Derbyshire, England, [6] who has no other family and wants to establish a relationship with the only other living member of the Salton family. Although Adam has already made his own fortune in Australia, he enthusiastically agrees to meet his uncle, and on his arrival by ship at Southampton the two men quickly become good friends. His great-uncle then reveals that he wishes to make Adam the heir to his estate, Lesser Hill. Adam travels there and quickly finds himself at the centre of mysterious events, with Sir Nathaniel de Salis, a friend of Richard Salton's, as his guide. Edgar Caswall, the new heir to a neighbouring estate, Castra Regis or Royal Camp, is in the process of making a mesmeric assault on a local girl, Lilla Watford. Meanwhile, Arabella March, of Diana's Grove, is running a game of her own, perhaps angling to become Mrs. Edgar Caswall. He is a slightly pathological eccentric and has inherited Franz Mesmer's chest, which he keeps in the Castra Regis Tower. Caswall seeks to make use of mesmerism, associated with Mesmer, a precursor to hypnotism, is obsessed with Lilla, and attempts to break her using mesmeric powers. However, with the help of Lilla's cousin, Mimi Watford, he is thwarted time and again. Caswall has a giant kite built in the shape of a hawk to scare away pigeons which have attacked his fields and destroyed his crops. For lack of anything better to do, he obsessively watches the kite and begins to believe that it has a mind of its own and that he himself is a god. Adam Salton finds black snakes on his great uncle's property and buys a mongoose to hunt them down. He then discovers a child who has been bitten on the neck and who almost dies as a result. Adam learns that another child has already been killed by a snake bite, and that animals have also been killed mysteriously throughout the county. Caswall's African servant, Oolanga, a man obsessed with death and torture, prowls around the Castra Regis estate, enjoying the carnage left by the White Worm. Adam's mongoose attacks Arabella, who shoots it to death. Adam buys more mongooses and keeps them locked in trunks when not using them to hunt. Arabella tears another mongoose apart with her hands. Oolanga takes a liking to Arabella, perhaps sensing something violent in her, and makes advances. Arabella scorns Oolanga and is deeply insulted that he would dare to approach her. In an attempt to win her over, Oolanga steals one of Adam's trunks (which he believes is filled with treasure, but is actually just another mongoose), and Adam follows Oolanga. Arabella lures Oolanga to a deep well in her house, then in rage and disgust murders him by dragging him down into the deep pit tunnelled through a bed of white china clay. Adam witnesses the murder, but has no evidence of it apart from his own word. Arabella writes him a letter the next day, with the previous night's events twisted, claiming her complete innocence. Adam and Sir Nathaniel begin to suspect that Arabella is guilty of

other crimes and that she wants to murder Mimi Watford

Federated Colonial Commander Adam Stuart is once again asked to take command of an experimental ship. This time he is traveling out into deep space to test dangerous new engines. Lorentizan traversable wormholes that hold unimaginable power and the possibility of changing the way humanity colonizes the stars. His crew is made up of the best the fleet has to offer, all five of them. Recently graduated Helen 'Sparks' Dower the pride of the Federated fleet engineering corp finds herself suddenly the chief engineer of this new ship, and it isn't finished being built Suddenly in charge of a staff Helen struggles to figure out these engines and her new crew. Covert Intelligence Officer Samantha Leeane is the new executive officer of the ship. Her first actual command position gives her typical skills quite a workout as she works to keep this new crew together. As the ragtag group finally begins testing the new engines a mysterious enemy appears out of nowhere and sends the Hypnos running across the Orion arm and beyond. During their travels they heroically face down kidnappers, ship thieves, pirates, and privateers and discover a secret that could threaten their entire home system. Perseus Transit is a wonderful journey through a new universe that is full of exciting pirates and privateers alike.

A Mind to Mind Conversation

The Century Dictionary and Cyclopedia: The Century dictionary, prepared under the superintendence of William Dwight Whitney; rev. & enl. under the superintendence of Benjamin E. Smith

The Empath. The word has found its way into our consciousness accompanied by ideas of healing, sharing emotion and pain. Empaths are sensitive, caring, responsive people who have at the core of their nature an innate ability to receive energy, information and awareness from others with a depth and intensity that is beyond our customary understanding of empathy. Yet, this very receptivity and permeability brings its own challenges. It is vital for empaths to recognize themselves as such and to consciously explore, understand and address this energetic flow in their life. Self-inquiry is the essential tool to understanding all that motivates and colors your experience of the world. The book explores in depth this receptivity, as well as tools, concepts and approaches to support understanding and how to flourish with this heightened sensitivity. This book is a shared journey, edited from years of workshops and sessions with Elisabeth Fitzhugh and the Orion group.

How to Die in Space

Druenn thought his world had come to an end when his father was butchered by bandits and his sister was captured and carried away, leaving him all alone. His mother had already walked off into the mist and never returned. She had been someone special, as he would later find out. He remembered his dying father's last wish to fulfill his mother's legacy: My mother died protecting the king and she has become a hero of legend. I shall keep her spirit and her legend alive. I am The Saviour Reborn. When he finally learned the truth about the history of Divine Victory, Druenn was determined to keep his promise to his father and avenge the killing of his mother.
