Hearings

Under European Directives, all member states are required to install 'intelligent metering systems' - smart meters - to at least 80% of domestic electricity consumers by 2020. The UK Government has opted for a more challenging programme, with plans for energy suppliers to install smart electricity and gas meters in all homes and smaller non-domestic premises in Great Britain by 2019. The Department estimates that the smart meters programme will cost some £11.7 billion. This large complex programme requires replacing around 53 million gas and electricity meters, with significant uncertainties over the estimated costs and benefits involved. Installation costs will be borne by consumers through their energy bills, but many of the benefits accrue in the first instance to energy suppliers. No transparent

mechanism presently exists for ensuring savings to the supplier are passed on to consumers, and the track record of energy companies to date does not inspire confidence that this will happen. There remain significant uncertainties in a number of key areas in the programme and the Department needs to address these by conducting proper trials to identify and manage the risks associated with an IT project involving such a substantial amount of money which is financed by individuals as consumers. The Department needs to ensure that the vulnerable, those on low incomes and those who use prepayment meters also benefit from smart meters. It would be unacceptable if these consumers bore the costs of smart meters through higher charges without getting a share of the potential benefits.

Data Warehousing Fundamentals for IT Professionals

The influences of modern technology and competitive environments have a direct impact on the outcomes of projects, irrespective of project type. This text is a response to the growing need for better management which many people find necessary when leading or working within teams or groups undertaking a project. Increasingly, people in a working environment are engaged in organised practices and utilising resources, facing the challenge of having to meet, or better, predetermined cost budgets and strict timetables. The fact that most work is organised into programs or singular projects means that people require increasing guidance in project management.

One of the most significant consequences of Co-op Bank's near-collapse, from a public policy perspective, was the collapse of Lloyds Banking Group's planned divestment under Project Verde. Co-op Bank's withdrawal forced Lloyds to resort to its fallback option of an Initial Public Offering. The result is a new bank, TSB, which, not having an existing banking presence of its own, consists solely of the business divested by Lloyds. Accordingly, it has a personal current account market share not of 7 per cent, but of 4.2 per cent. There is a risk that a bank of this size might struggle to grow significantly and to act as a true challenger in the market. Had Co-op Bank's resulting capital shortfall been uncovered earlier, it is likely that the bank would not have progressed so far with Verde. As it was, the rapid and late emergence of the capital problem led to Co-op's withdrawal from the Verde process at a relatively late stage. The Committee recommends that the FRC investigation and the independent inquiry into the events at Co-op Bank consider the role of KPMG and the FSA in relation to the late emergence of loan impairment and IT losses. On the basis of these findings, the independent inquiry into the events at Co-op Bank should also form a view on whether Co-op's Verde bid could or should have been halted sooner. While it may not have been fully transparent from the start that Co-op Bank's bid was doomed to failure, it was beset by problems from an early stage. But it was not these problems that killed the deal-it was the capital shortfall that emerged only late in the day. It is important, from every angle to determine why the capital shortfall was not uncovered earlier.
